

PACIFIC GRO

Seafood for the Soil®

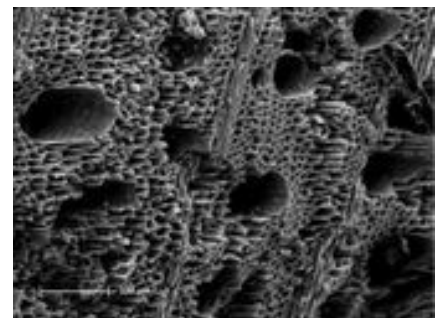

Pacific Gro Oceanic Hydrolysate with Biochar

**Introducing a liquid Biochar fertilizer
loaded with delicious marine nutrients:
Salmon and micronized Shrimp and Crab shell**

Pacific Gro Oceanic Hydrolysate 2-2-0.3 with Biochar

Biochar's honeycomb carbon structure provides surface area for adsorption of nutrients, like an electric sponge. It boosts cation exchange capacity (CEC) which holds nutrients in plant-available form, protected from leaching away.

Rainier cherries grown with Pacific Gro in Yakima valley

- ◇ Builds soil organic matter and improves aggregation, particularly by growth of fungal hyphae.
- ◇ Stimulates soil microbiology, especially mycorrhizae and other fungi. A diverse soil food web can supply nitrogen, phosphorous and other nutrients from the air and soil.
- ◇ Calcium from hydrolyzed shell and fish bone is highly plant available, outperforming many conventional Calcium sources
- ◇ Supplies a broad range of nutrients from the Pacific ocean
- ◇ Screened to 150 mesh, for drip and foliar use
